Bronx, NY

## People

- Architectural firm: Populous
- Engineering firm: Thornton Tomasetti
- Construction manager: Turner Construction

## Products and Services

The contract awarded to Structal-Heavy Steel Construction was for the supply and fabrication of 13,000 tons of structural steel, including design-build, design-assist and detailing services.

## Highlights

The famed frieze of the 51,800-seat Yankee Stadium adds more than a distinctive decorative touch; it is part of the support system for the cantilevers beneath the upper deck and for the lighting above it. The frieze was shaped, painted and shipped by panel – each weighing approximately 7.5 tons – to the site and hoisted into place.

The frieze looks the same from behind as it does from the front, with no connection showing though it had been constructed in place.
