

## Philadelphia Eagles' Lincoln Financial Field

When the Philadelphia Eagles decided to build a one-of-a-kind stadium, their contractor, Turner Construction Company, realized that they needed a steel fabricator who was a team player capable of producing and erecting specialized structural steel components on a very demanding schedule.

Structal-Heavy Steel Construction won the contract for the fabrication and erection of 10,000 steel members with wide-ranging complexity, including raker beams, "boomerang" columns and zee-shaped roof girders. With Structal's expertise, the steel was fabricated in record time allowing follow-up trades early access and the time they needed for successful project completion.
