William A. Berry Construction

## Products and Services

The contract awarded to Structal-Heavy Steel Construction was for the supply, fabrication and erection of 28,000 tons of structural steel and metal deck, including design-assist and detailing services.

## Highlights

When all the structural steel bids for Boston's Landmark new Convention Center went over budget, the Massachusetts Convention Center Authority chose to pursue the project with Structal-Heavy Steel Construction. Structal, along with the design team and the construction manager, went to the drawing table in search of cost-saving measures. Through extensive value engineering and innovative ideas for the construction of the project, more than \$20 million was reduced from the original bid price.

The Structal team's dedication and participation in the cost reduction effort was instrumental in moving the project forward. A willingness to look for solutions when they are not easy to find is a hallmark for Structal-Heavy Steel Construction.
